

RED POLYETHYLENE TAPE

Product Information

RED TAPE

30-Day Tape

Applications:

Red polyethylene tape is designed for protective sealing, hanging, seaming, splicing and patching applications where a highly conformable material is required. This product combines the properties of a polyethylene film and a rubber-based, pressure-sensitive adhesive. The high-density polyethylene film offers high shear and outstanding conformability, good abrasion and chemical resistance, and outstanding moisture-barrier properties. The rubber-based adhesive system provides high adhesion, permanent bonding, and outstanding quick-stick properties for those "hard to adhere to" surfaces such as polyethylene films, plus the added feature of clean removal.

Technical Data

Substrate:	High Density Polyethylene Film
Adhesive:	Rubber Based Pressure Sensitive
Total Thickness:	0.008"
Tensile Strength:	25 lbs/inch width
Elongation (at break):	80 percent
Adhesion (to steel):	35 oz/inch width
Ultraviolet Resistance:	Excellent

Note: Each user should make his own tests to determine the products suitability for his own intended uses and shall assume all risks and liability in connection therewith. All properties are approximate, representing average figures obtained from a series of tests.
