**Solutions for Recycling Flexible Foams**

**GRANULATORS/SHREDDERS**

Badger™ granulators/shredders are ruggedly built to international standards, to handle a wide variety of materials including most soft and rigid foams. They also process bulky blow molded parts, thermoformed web and cut-sheet products, extruded sheet and film, plus the full gamut of post-consumer plastics for recycling operations.

**BALERS**

Badger™ foam balers have been engineered specifically for the unique challenges of flexible foam. What works on cardboard or plastics just won’t handle foam. So we took a different approach, and designed these balers specifically to tame the toughest foam materials from the ground up.

**BUYBACK PROGRAM**

Recycling polyurethane, polypropylene and polyethylene is not only the responsible thing to do, it can also be profitable. Demand Products will connect you with companies that will buy processed material and pick it up from your location. That means no more shipping costs to haul off foam waste, and no more foam scrap heading to a landfill! A win-win for everyone concerned.

EPS foam can be reduced as much as 96% from its original volume. Manufacturers will utilize the recycled material to produce a variety of end products such as picture frames, sun glasses, computer housings, tennis shoes and more. Call today for more information.

**DEMONSTRATION AND TESTING**

Demand Products is the only company to offer a showroom where you can see a variety of machines in action before making a buying decision. We offer the Badger™, Cutlas™, Wintech™ and Megaplot™ equipment lines to address all your foam management needs. If you ship a sample of the material you work with, we can arrange for a demonstration while you’re on site.

Call today to schedule your visit.

**REV. 3.2016**
Scrap EPS foam is costing companies millions of dollars in waste management fees each year. It’s a burden on the ecosystem - landfills, transportation, fuel costs and man-hours. The solution is Foam Recycling.

Demand Products is an expert in foam and an innovator in the foam industry. We have developed several new technologies that will fit your company’s budget and foam recycling needs. Our free ROI analysis can help you determine the best fit.

Badger™ Densifiers, Compactors, Grinders, Granulators and Shredders are today’s best solutions for foam waste management.

**Heat Densifiers**

Badger™ Densifiers will reduce expanded polystyrene, polypropylene and polyethylene by up to 98% of its original form. Our Densifiers will pay for themselves in a short amount of time by keeping your scrap foam out of the waste stream and turning it into marketable bricks. Heat densification will not work with polyurethane.

**Grinder - Storage Hopper - Densifier**

All in One

Badger™ FB Series systems are designed to fit a range of recycling needs based on a customer’s processing requirement of scrap foam. The two production units are ideal for factories and manufacturing facilities. They feature an input feed rate of up to 1200 lbs of foam per hour.

**Grinders**

Badger™ Grinders reduce the volume of polystyrene foam for easier transportation. They break up EPS foam boxes, EPS sheets, EPP blocks, and XPS foam board to make small flakes. Grinders are great for waste reduction as flakes require less storage volume and facilitate further processing by densification or compaction.

**Cold Compactors**

Badger™ EPS Compactors reduce the size of expanded polystyrene foam for easier transportation. They are widely used in food processing plants, electronics factories, supermarkets and other manufacturing facilities.

**Transform waste piles into profitable bricks**

Recycling is not a buzz word. Recycling is a business opportunity.

What’s great about EPS Foam - it’s 100% recyclable and profitable. You can make everything from surfboards to picture frames from recycled foam.
